Description

The description of warning log with empty alarm card ID is inaccurate

1. When the alarm card ID is empty, a warning appears. And write out that the alarm card ID near the existing alarm card is empty

2. Actual results: the log shows that the alarm card in front of an alarm card is empty and the expression is inaccurate. Some alarm cards with empty ID are not in front of this alarm card

Expected result: the ID near the alarm card can be changed to empty
